EDUCATION

Ferris State University

Bachelor of Science in Digital Media Software Engineering, GPA: 4.00

Big Rapids, MI

May 2022 - May 2026

EXPERIENCE

Telic AI

Software Engineer

Remote – Hastings, MI

Oct 2025 - Present

- Researched and experimented with dozens of ML models to identify the most effective models at image generation and image mixing for an undisclosed use-case.
- Experimented with creating multi-language documents from a node-js environment using images and text using libraries like pdfkit and puppeteer.
- Created an ecommerce web platform using PayloadCMS, PostgreSQL, Docker, and Next.js to create products, manage content for the website, and procure personalized products via ML model integration and automation.

AD Solutions

Software Engineer

Remote – Hastings, MI

June 2024 - Present

- Owned the end-to-end project lifecycle after securing a solo contract, automating the entire software delivery process by architecting a multi-stage CI/CD pipeline with GitHub Actions for testing, Docker builds, and secure, one-click deployments.
- Engineered a secure internal portal using React, TypeScript, and Bootstrap as well as a customer masquerade feature that reduced support resolution times.
- Designed and implemented a new, normalized database schema from the ground up to enhance the platform scalability from the existing few thousand customers to much, much more.
- Developed a high-performance payment automation that processes complex transactions across 20+ tables in-real-time, eliminating manual accounting intervention and saving dozens of hours per month.
- Created cross-departmental automation tools for Sales, HR, and the CX team, including a customer onboarding system with automated email reminders, a batch account creation system, and a lead-tracking reporter, enhancing team velocity.

Kendall College of Art and Design

Software Engineer Intern

Remote – Allegan, MI

Sept 2023 - May 2024

- Engineered the core backend for an industry-first billing portal by designing a Spring Boot application with MariaDB database and integrating with a massive, undocumented ERP system by creating at least a dozen RESTful APIs.
- Developed key frontend components using React and TypeScript, including secure login, payment, and autopay UIs, while also driving project velocity by managing the team's agile workflow and issue tracking on GitHub.

OPEN SOURCE

PROJECTS

- **Vala JetBrains IDE Plugin:** Authored and published an open-source language plugin for the Vala language.
- **Warehouse Item Classification:** Engineered a computer vision system to reduce military disposition waste.
- **Portfolio Website:** Created a portfolio website using Preact, TypeScript, TailwindCSS, and GitHub Pages.
- **Customer Support Chatbot:** Created a ChatGPT-powered customer support chatbot widget for websites.
