EDUCATION

Ferris State University

Bachelor of Science in Digital Media Software Engineering, GPA: 4.00

Big Rapids, MI

May 2022 – May 2026

EXPERIENCE

Ferris State University

Research Assistant

Remote

Jan 2026 – Present

- Served as the sole developer for Ferrell, a custom LLM-powered VS Code extension designed to support students.
- Built the application from scratch, connecting a modern webview frontend with React, TypeScript, and Tailwind CSS to a secure, Dockerized Java Spring Boot backend and PostgreSQL database hosted on AWS.
- Presented the architecture and capabilities of Ferrell to a diverse audience as a featured speaker at Ferris AI Day.

Telic Corporation

Software Engineer

Remote

Oct 2025 – Present

- Created an ecommerce web platform using PayloadCMS, PostgreSQL, Docker, and Next.js to create products, manage content for the website, and procure personalized kids books via ML model integration and automation.
- Researched and experimented with dozens of ML models and platforms to identify the most effective models at image generation, mixing, face-swapping, and feature alteration.
- Implemented comprehensive i18n (English and Arabic) for international reach, and customized the PayloadCMS admin dashboard to streamline book creation and content management.

AD Solutions

Software Engineer

Remote

June 2024 – Present

- Owned the end-to-end project lifecycle after securing a solo contract, automating the entire software delivery process by architecting a multi-stage CI/CD pipeline with GitHub Actions for testing, Docker builds, and quick deployments.
- Engineered a secure internal portal using React, TypeScript, and Bootstrap as well as a customer masquerade feature that reduced support resolution times.
- Designed and implemented a new, normalized database schema from the ground up to enhance the platform scalability from the existing few thousand customers to much, much more.
- Developed a high-performance payment automation that processes complex transactions across 20+ tables in-real-time, eliminating manual accounting intervention and saving dozens of hours per month.
- Created automation tools for Sales, HR, and the CX team, including a customer onboarding system with automated email reminders, a batch account creation system, and a lead-tracking reporter, enhancing team velocity.

Kendall College of Art and Design

Software Engineer Intern

Remote

Sept 2023 – May 2024

- Engineered the core backend for an industry-first billing portal by designing a Spring Boot application with MariaDB database and integrating with a massive, undocumented ERP system by creating at least a dozen RESTful APIs.
- Developed key frontend components using React and TypeScript, including secure login, payment, and autopay UIs, while also driving project velocity by managing the team's agile workflow and issue tracking on GitHub.

PROJECTS

Warehouse Item Classification: Engineered a computer vision system to reduce military disposition waste.

Portfolio Website: Created a portfolio website using Preact, TypeScript, TailwindCSS, and GitHub Pages.

LaTeX Résumé Template: Created a modular LaTeX resume template which this résumé uses.

Remote Development Environment: Setup and used a RDE on the cloud with Hetzner for a few months.

OPEN SOURCE

Vala JetBrains IDE Plugin

github.com/vala-lang/vala-jetbrains

- Published plugin for JetBrains IDEs enabling development in the Vala programming language made in Java.
- Implemented a variety of features using lsp including codelens, inline-docs, syntax checks, and more using LSP4IJ.
- Added advanced syntax highlighting, vala-lint integration, new project wizard, formatter, and basic syntax checks.

SKILLS

Tech Stack: Java, JavaScript, TypeScript, Python, Spring Boot, React, Docker, Git, TailwindCSS, AWS, GCP
